

IDEATION DOCUMENT SEMESTER 2

AniX – INDIVIDUAL ASSIGNMENT

GITLAB REPOSITORY LINK

AniX Repository on Fontys GIT

APP DESCRIPTION

The primary objective of AniX is to provide anime enthusiasts a platform where they can watch trailers, read detailed descriptions, and submit reviews for various anime series. The application serves as a centralized hub for anime-related content, aiming to enhance user engagement and knowledge.

Admins can manage the content through a dedicated Windows Forms application, following the CRUD model. They can add new anime trailers, update details, or remove outdated information. User-submitted reviews can also be filtered by the admin to ensure the quality and appropriateness of the content.

While viewing trailers and reading anime details are open to all visitors, submitting a review requires account registration and login. The content will be organized by various categories such as genre, release year, and popularity, among others.
